MCFARLAND WATER NOTIFICATION
(McFarland water report to the state)

In compliance with the state drinking water warnings system, the City of McFarland sent out a notification to residents concerning a high level of nitrate in one of its water wells that feeds into the city's water system.

The city is making every effort to ensure the city's water coincides with the requirements mandated by the state and is diligently working on plans to improve the city's overall water supply system.

The city has taken the following measures to address this urgent matter:

- Reduced the utilization of the contaminated well.
- Increased water production from alternative city wells.
- Initiated engineering plans to introduce a water treatment plant for the contaminated well.
- Sought funding from the State Water Resources Control Board to bolster our critical water infrastructure.

We remain committed to ensuring our water meets state standards and will keep residents updated on our progress.
